Zhang, H., 255
Zhao, F. Z., 291

SUBJECT INDEX TO VOLUME 27

p-Version least-squares formulation, 213

A-posteriori error estimator, 63
Accurate discretization of 3-d equations, 371
Approximation for combined mode using the Finite-Element method, 309
Assessment of higher order upwind schemes, 1

Discrete Maximum principle and finite elements, 447

Extension of the fractional step method, 175

Finite-Element analysis of phase-change problems, 277
Finite-Element methods for the Stefan problem, 417
Free surface flow and heat transfer in cavities, 487

Hyperbolic grid generation method, 43

Incompressible flow, 323
  Mathematical formulation 323
  Applications, 337

MAGG for moving and free boundary problems, 255
Marker particle scheme for interface tracking, 127
  Tracking procedure, 132
  Mergers of interfaces, 135
Matrix solver for pressure correction equations, 355
Methods for second-order discrete ordinate formulation, 155
Modeling of power station steam condensers, 81
  Convergence behavior of a finite-volume model, 81
  Improvement of solution behavior, 103

Noniterative procedure for the solution of phase-change conduction problems, 437

Open boundary condition for nonstaggered grids, 23

Plane-front solidification with kinetic undercooling, 467

Scalar Equation algorithm, 487, 490
Schemes for high-temperature timber drying, 393
Sensitivity coefficient method for inverse problems, 291

Uncoupled algorithm for 3-d incompressible flows, 237
Unstructured additive correction multigrid method, 195
